## The emphasis is on *variable* in variable-leaf milfoil

Phylogenetic tree showing the relationships between different genetic lineages of variable leaf milfoil. The particular strain found in the Yaphank Lakes is indicated in Red.

#### Different geographic origins

## Some invasive lineages found in the aquarium trade

- Yaphanks lineage only found in northeast Atlantic Coast States
- Most similar to NJ lineage (one lake)

# Why don't we see it anywhere else?

- Haven't searched enough places?
- Unique lineage created through recent hybridization?
- Endemic native lineage that has gone awry?

#### **Potential Implications**

- Different lineages have different ecologies
- May require different treatments
